13	HMCHR/D/429	ANITA SHA	32	F	RGH IPD ROURKELA MOB- 7077397187	NP SWAB	19/05/2021	NEGATIVE	MICROBIOLOGY

Checked and Approved by

*Note: The results relate only to the specimens tested and should be correlated with clinical findings. Interpretation guidance:-*

- *Please ensure and maintain the confidentiality of the test report.*
- *Testing of referred clinical specimens was considered on the basis of request/referral received from/ through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.*
- *A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.\**
- *Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. Therepeat specimens maybe considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.\**
- *The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.\**
- *A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of co infections.*
- *Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune*
