

Test Report

Date and time of reporting (dd/mm/yyyy) : 12 hour format	24/05/2021
Address of the referring facility/Hospital	CDM & PHO- ROURKELA
SPECIMEN DETAILS	
Date & Time of receipt of specimen at State VRDL, SCBMCH (dd/mm/yyyy)	23/05/2021
Condition of specimen received / Quality on arrival	Under cold chain
REPORTING DETAILS	

Sl. No.	Sample ID	SRF ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result 2019-nCoV RTPCR
1	nCoV8L95427	2137300479221	THOMAS SAMAD	22	M	NP. Swab	24-05-2021	NEGATIVE
2	nCoV8L95428	2137300479256	SANDIP PATEL	36	M	NP. Swab	24-05-2021	NEGATIVE
3	nCoV8L95429	2137300479280	BIDU PRASAD NAYAK	19	M	NP. Swab	24-05-2021	NEGATIVE
4	nCoV8L95430	2137300479324	MAYADHAR KUAR	44	M	NP. Swab	24-05-2021	NEGATIVE
5	nCoV8L95431	2137300479351	ABHISHEK DEO	32	M	NP. Swab	24-05-2021	NEGATIVE
6	nCoV8L95432	2137300479370	ANIMARANI DEO	53	F	NP. Swab	24-05-2021	NEGATIVE
7	nCoV8L95433	2137300479404	GOLEKH CH BARIK	57	M	NP. Swab	24-05-2021	NEGATIVE
8	nCoV8L95434	2137300479512	DIBRU CHAKI	40	M	NP. Swab	24-05-2021	NEGATIVE
9	nCoV8L95435	2137300479530	SIVARAM MOHANTA	35	M	NP. Swab	24-05-2021	NEGATIVE
10	nCoV8L95436	2137300479545	DEBADATTA BEHERA	35	M	NP. Swab	24-05-2021	NEGATIVE
11	nCoV8L95437	2137300479562	DEBA PRASALLA PRUSTY	33	M	NP. Swab	24-05-2021	NEGATIVE
12	nCoV8L95438	2137300479603	SIDHIDA PRASAD LENKA	32	M	NP. Swab	24-05-2021	NEGATIVE
13	nCoV8L95439	2137300479640	NABIN SANDHA	35	M	NP. Swab	24-05-2021	NEGATIVE
14	nCoV8L95440	2137300479660	PITRUS KISPATTA	30	M	NP. Swab	24-05-2021	NEGATIVE
15	nCoV8L95441	2137300479690	RAJA MAHALI	24	M	NP. Swab	24-05-2021	NEGATIVE
16	nCoV8L95442	2137300479716	KALPATARU PANDA	52	M	NP. Swab	24-05-2021	NEGATIVE

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeat sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune
