

Test Report

Date and time of reporting (dd/mm/yyyy) : 12 hour format	11/04/2021
Address of the referring facility/Hospital	CDM & PHO- ROURKELA
SPECIMEN DETAILS	
Date & Time of receipt of specimen at State VRDL, SCBMCH (dd/mm/yyyy)	09/04/2021
Condition of specimen received / Quality on arrival	Under cold chain
REPORTING DETAILS	

Sl. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result 2019-nCoV RTPCR
1	nCoV6L99417	PADMA SINGH	66	F	NP. Swab	11/4/2021	NEGATIVE
2	nCoV6L99418	SOUYMA RAJ BISWAL	22	M	NP. Swab	11/4/2021	NEGATIVE
3	nCoV6L99419	LATA BANSAL	38	F	NP. Swab	11/4/2021	NEGATIVE
4	nCoV6L99420	SANSKRITY BANSAL	20	F	NP. Swab	11/4/2021	NEGATIVE
5	nCoV6L99421	ASHUTOSH BANSAL	16	M	NP. Swab	11/4/2021	NEGATIVE
6	nCoV6L99422	MANOJ BANSAL	45	M	NP. Swab	11/4/2021	NEGATIVE
7	nCoV6L99423	MANJU BANSAL	43	F	NP. Swab	11/4/2021	NEGATIVE
8	nCoV6L99424	BISISTHA BANSAL	16	F	NP. Swab	11/4/2021	NEGATIVE
9	nCoV6L99425	MANGAL MAHATO	24	M	NP. Swab	11/4/2021	NEGATIVE
10	nCoV6L99426	SHYAM CHARAN BESHRA	16	M	NP. Swab	11/4/2021	NEGATIVE
11	nCoV6L99427	ARCHI PRUSTY	17	F	NP. Swab	11/4/2021	NEGATIVE
12	nCoV6L99430	SWARNENDU NAYAK	34	M	NP. Swab	11/4/2021	NEGATIVE
13	nCoV6L99431	SAGARIKA NAYAK	58	F	NP. Swab	11/4/2021	NEGATIVE
14	nCoV6L99432	PURNIMA NAYAK	22	F	NP. Swab	11/4/2021	NEGATIVE
15	nCoV6L99433	LAXMIMANI PAL	72	F	NP. Swab	11/4/2021	NEGATIVE
16	nCoV6L99437	KATKAM SRINIVAS	28	M	NP. Swab	11/4/2021	NEGATIVE
17	nCoV6L99439	PRADIP KUMAR ROUTRAY	64	M	NP. Swab	11/4/2021	NEGATIVE

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeated specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune
