

## Test Report

Date and time of reporting (dd/mm/yyyy) : 12 hour format	16/04/2021
Address of the referring facility/Hospital	CDM & PHO- ROURKELA
<b>SPECIMEN DETAILS</b>	
Date & Time of receipt of specimen at State VRDL, SCBMCH (dd/mm/yyyy)	15/04/2021
Condition of specimen received / Quality on arrival	Under cold chain
<b>REPORTING DETAILS</b>	

Sl. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result 2019-nCoV RTPCR
1	nCoV7L28046	SUSANTA KUMAR SAMAL	45	M	NP. Swab	16/4/2021	NEGATIVE
2	nCoV7L28047	RABINDRA KUMAR ROUT	57	M	NP. Swab	16/4/2021	NEGATIVE
3	nCoV7L28048	SANTOSH KUMAR ROUT	27	M	NP. Swab	16/4/2021	NEGATIVE
4	nCoV7L28049	GOLOK CH NAYAK	58	M	NP. Swab	16/4/2021	NEGATIVE
5	nCoV7L28050	KADAMBINI SAHOO	28	F	NP. Swab	16/4/2021	NEGATIVE
6	nCoV7L28051	SUNANDA	33	F	NP. Swab	16/4/2021	NEGATIVE
7	nCoV7L28052	ANJANA PODAMA SINGH	29	F	NP. Swab	16/4/2021	NEGATIVE
8	nCoV7L28053	SASMITA ROUT	56	F	NP. Swab	16/4/2021	NEGATIVE
9	nCoV7L28054	BISWAJEET SAHU	10	M	NP. Swab	16/4/2021	NEGATIVE
10	nCoV7L28055	AMARJEET SAHU	22	M	NP. Swab	16/4/2021	NEGATIVE
11	nCoV7L28061	MANINI SAHU	33	F	NP. Swab	16/4/2021	NEGATIVE
12	nCoV7L28062	LAXMI PRIYA SAHU	24	F	NP. Swab	16/4/2021	NEGATIVE
13	nCoV7L28063	BHARAT SHUKLA	37	M	NP. Swab	16/4/2021	NEGATIVE
14	nCoV7L28064	SANTOSH KUMAR PANDA	47	M	NP. Swab	16/4/2021	NEGATIVE
15	nCoV7L28065	DAMAYANTI SAHOO	62	F	NP. Swab	16/4/2021	NEGATIVE
16	nCoV7L28066	AUROBIND SAHOO	47	M	NP. Swab	16/4/2021	NEGATIVE
17	nCoV7L28067	B C MAHAPATRA	58	M	NP. Swab	16/4/2021	NEGATIVE

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

## Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.\*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.\*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.\*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

## Test Report

18	nCoV7L28068	KALPANA KUMARI PATRA	56	F	NP. Swab	16/4/2021	NEGATIVE

## Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.\*
- Repeats sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.\*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.\*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

## Test Report

143	nCoV7L28203	DURGA TANTY	46	M	NP. Swab	16/4/2021	NEGATIVE

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

## Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.\*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.\*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.\*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

## Interpretation guidance:-

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens was considered on the basis of request/referral received from/through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.\*
- Repeated sampling and testing of lower respiratory specimens is strongly recommended in severe or progressive disease. There repeats specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing.\*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate for testing.\*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for publication in any journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune
