Date and time of reporting (dd/mm/yyyy): 12 hour format	18/04/2021				
Address of the referring facility/Hospital	CDM & PHO- ROURKELA				
SPECIMEN DETAILS					
Date & Time of receipt of specimen at State VRDL, SCBMCH (dd/mm/yyyy)	17/04/2021				
Condition of specimen received / Quality on arrival	Under cold chain				
REPORTING DETAILS					

SI. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result 2019- nCoV RTPCR
1	nCoV7L51308	RADYUANA DHAL	17	М	NP. Swab	18/4/2021	NEGATIVE
2	nCoV7L51309	SAPNA MAI MISHRA	50	F	NP. Swab	18/4/2021	NEGATIVE

SCR Medical College & Hospital Cuttack

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:
• Please ensure and maintain the confidentially of the testreport.

- Testingofreferredclinicalspecimenswasconsideredonthebasisofrequest/referralreceivedfrom/throughStateSurveillanceOfficer(SSO)of concerned State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the casedefinition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.*
- Repeatsamplingandtesting of lowerrespiratoryspecimenisstronglyrecommendedinsevereorprogressivedisease. Therepeatspecimens may be considered after a gap of 2 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL)fluid would be appropriate fortesting.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Pleasenotethattheseresultsarenottobeusedforanythesisorpresentationsorfor Publicationinany Journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Research Scientist VRDL S.C.B Medical College & Hospital Cuttack

Checked and Approved by

PI, VRDL SCB Medical College & Hospital

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

- Please ensure and maintain the confidentially of the testreport.
- $Testing of referred clinical specimens was considered on the basis of request/referral received from {\it through State Surveillance Officer} (SSO) of concerned to the concerned concerned$ State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the casedefinition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not excludeinfection.*
- Repeatsamplingandtestingof lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be a simple of the property ofconsidered after a gap of 2 - 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate fortesting.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Pleasenotethattheseresultsarenottobeusedforanythesisorpresentationsorfor Publicationinany Journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune

Note: The results relate only to the specimens tested and should be correlated with clinical findings. Interpretation guidance:-

Please ensure and maintain the confidentially of the testreport.

- $Testing of referred clinical specimens was considered on the basis of request/referral received from {\it through State Surveillance Officer} (SSO) of concerned to the concerned concerned$ State Integrated Disease Surveillance Programme (IDSP) affirming requirements of the casedefinition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, does not excludeinfection.*
- Repeatsamplingandtestingof lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be a simple of the property ofconsidered after a gap of 2 - 4 days after the collection of the first specimen for additional testing.*
- The sputum (if produced), endotracheal aspirate (ETA) or bronchoalveolar lavage (BAL) fluid would be appropriate fortesting.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Pleasenotethattheseresultsarenottobeusedforanythesisorpresentationsorfor Publicationinany Journal without the prior permission of the Director, ICMR-National Institute of Virology, Pune
