Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:-

   ● *Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.*

   ● *A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection**

   ● *A positive test result is only tentative, and will be reconfirmed by retesting.*

   ● *Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. **

   ● *A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.*

   ● *Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR*
